

## ISO14001 ENVIRONMENTAL POLICY

---

As part of Camco's vision of a sustainable low carbon society by providing carbon related consultancy services, we recognise that in our day-to-day operations we inevitably impact on the environment in a number of ways, e.g. waste production, use of natural resources and CO<sub>2</sub> emissions. As a responsible company we are fully committed to continual improvement in our environmental performance and will take all reasonably practicable steps to prevent environmental pollution and reduce our impact on the local and global environment. This will be achieved by:

- Complying with and where possible exceeding the requirements of all relevant legal and other requirements and taking appropriate measures to prevent pollution
- Establishing and maintaining an environmental management system based on the requirements of ISO14001 and auditing our environmental performance
- Developing continuous improvement programmes based on the setting and review of annual objectives and targets, ensuring we remove or reduce our significant aspects and impacts
- Making more efficient use of resources by increased energy conservation and waste recycling
- Providing information and training to all employees and persons working for or on behalf of the Company to encourage effective contribution to our environmental goals
- Ensuring that employees at all levels and persons working for or on behalf of the company take into account environmental issues when planning, implementing and undertaking projects
- Communicating this policy to all our employees, persons working for or on behalf of the Company, interested parties and members of the public
